SEO *** - means white internal resource optimization, set of methods for search engine promotion, which do not contradict the rules of search engines and promote the most "natural" search results. This is the work on the site and its internal optimization according to the guidelines of search engines (eg, Google).

For example:

- creating interesting and useful content for visitors
- optimizing titles and texts on website
- internal links (relink)
- handy and clear user navigation
- Site speed increase
- Removing technical issues and speed up indexing by search robots (removal of the same pages and meta tags or closing unnecessary technical pages from indexing in robots.txt, etc.).
- Site map creation
